SHORT TRANSFERS MADE SIMPLE

HANDYSHEET™ AND HANDYTUBE™ MANUAL TRANSFER AIDS.

Short transfers are often anything but simple. That's why we designed the HandySheet and HandyTube manual transfer aids to help you reposition patients and apply slings safely—and with less strain.

- Slide patients more easily with high-quality fabric that reduces friction between the patient and the underlying surface.
- Reposition a wide range of patients - from normal weight to patients of size - as well as support prone positioning.
- Expect long-term performance with fabric that holds up to repeated washing.

HANDYSHEET™

The HandySheet is an excellent aid for applying a sling, especially on patients of size, pain-sensitive patients and patients with contractures. Designed for use in pairs, it comes in a two-sheet set and is available in two sizes:

- Long versions have bed attachment loops so fewer caregivers are needed.
- Short versions have small pockets to help you apply a sling in small spaces (e.g., narrow wheelchairs).

HANDYTUBE™

The HandyTube is a sliding sheet designed to help you move patients higher up in bed, turn them in bed or transfer them between beds.

It is available in short, long and wide models to meet a variety of repositioning needs.

ORDERING INFORMATION

Part Number	Description	Size	Quantity
3715015-10	HandySheet Short, without handles, size M	70 x 70 cm (28 x 28 in)	Sold in sets of 10 pairs

hillrom.com

The HandyTube™ and the HandySheet™ are developed by Hill-Rom to facilitate patient transfers while in a prone position. They are manufactured from a low-friction material that minimizes friction between the patient and the bedding. HandyTube and HandySheet are not intended for lifting or transferring patients from a lying to sitting position.
