CLEVELAND CLINIC STREAMLINES CARDIOPULMONARY CARE WITH **CARDIO SERVER**

MODALITIES:

Cardio Server ECG Management and PFT Modality.

THEIR PROBLEM:

Manual scanning and interpretation of PFT results were time consuming and error-prone.

THEIR SOLUTION:

The integration of **Cardio Server** automated report generation and interpretation helped eliminate manual tasks. **Cardio Server** simplified workflows to help improve efficiency and accuracy in the reconciliation process.

Before the integration of **Cardio Server**, Jonathan, Pulmonary Lead Analyst, and his team spent valuable time manually scanning in PFT results and interpretations, a flawed process that resulted in inefficient use of time and entry errors.

Cardio Server's automation played a crucial role in efficiently handling the high volume of PFT reports processed weekly, liberating the team from the manual effort that was impeding their efficiency.

"**Cardio Server has been a game-changer for us.** The digital approach to generating reports and interpretations has not only saved us time but has significantly improved the accuracy of our data," Jonathan shared.

Jonathan highlighted the seamless integration of **Cardio Server** into their existing workflows, stating, "What's great about **Cardio Server** is that it doesn't disrupt our operations; it enhances them. The system eliminated manual processes that were slowing us down, leading to a considerable improvement in our overall efficiency. We're now able to spend more time with our patients, providing more of the hands-on care they deserve."

A notable success story lies in the reconciliation process, where **Cardio Server** facilitated matching patients to PFTs that hadn't been initially entered. "The reconciliation process used to be time-consuming and sometimes unsuccessful, resulting in a high number of PFTs going unbilled. **Cardio Server** has made it so much more manageable. It's quick, accurate, and has significantly reduced errors," says Jonathan.

> **Cardio Server** is an indispensable tool for my pulmonary team, optimizing workflows, enhancing efficiency, and contributing to improved patient care.
