Smart Device Connectivity

Intervene Early to Keep Patients Safe

ENSURE PATIENTS ARE AT THE CENTER OF CARE

New technologies like smart beds, continuous monitoring devices, Electronic Medical Records (EMR) and mobile devices have revolutionized the way that patient data is collected and communicated. But like any great advancement, the value of technologies aren't truly working their best, until they're working seamlessly together.

Hillrom™ Smart Device Connectivity collects and analyzes patient data from connected devices, identifies patients at risk for deterioration, and communicates actionable insights to caregivers so they can intervene early and keep patients safe.

IMPROVE PATIENT SAFETY, REDUCE COSTS, REDUCE LENGTH OF STAY AND MUCH MORE WITH HILLROM™ SMART DEVICE CONNECTIVITY.

ACTIONABLE INSIGHT AT THE POINT OF CARE TO IMPROVE PATIENT SAFETY

Detect patient deterioration proactively with Hillrom™ Patient Risk Surveillance

Continuously update and communicate dynamic risk assessment of patient deterioration risk scores to caregivers. Patient data from the Contact-Free, Continuous Monitoring solution, the EMR, and the medical device eco-system populate MEWS and SIRS scores then communicate assigned tasks to care teams to proactively manage adverse events.

Connect devices to collect and analyze patient data in near real-time

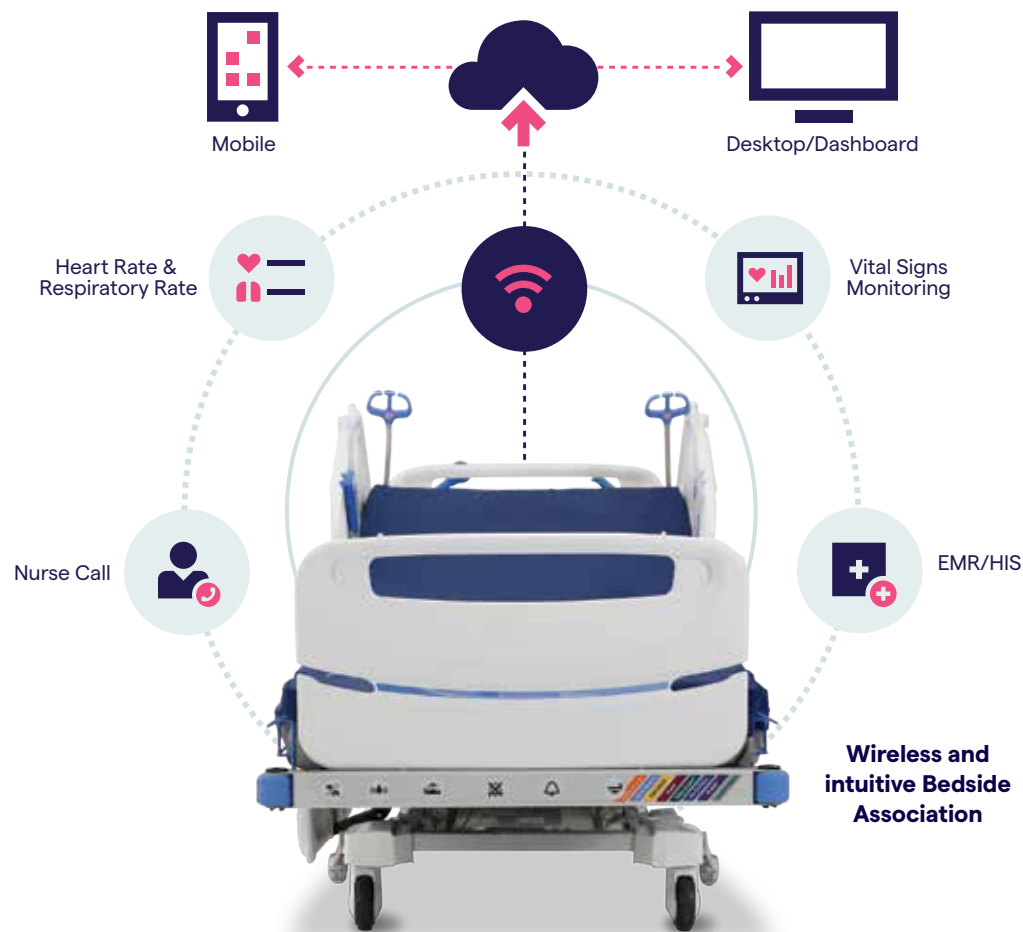

Hillrom's Centrella® Smart+ bed connects wirelessly to your hospital wi-fi network, enabling Bed Association to receive patient information from your Hospitals Admit/Discharge/Transfer system. By collecting and analyzing patient data, including patient heart rate, respiratory rate, weight, and alert information, caregivers can make informed decisions and care plans to keep patients safe.

Identify patients at risk for deterioration

Leverage your EMR and medical devices by coordinating patient data to provide caregivers early warning scores, alerts, and contextual information on the risks of patient deterioration. Early identification of changes in patient condition enables caregivers to shift from reactive to proactive care during a patient's deterioration.

Communicate actionable insights

Provide the right clinical insights to the right person at the right time with real-time, remote communications to caregivers via Voalte® Mobile App, solution Dashboard, Voalte® Status Board, and 3rd party systems. Ensure caregivers always stay connected with their patients and are aware when their patient is at risk.

This section contains four panels illustrating the system's capabilities:

- Remote communications to caregivers on Voalte® Mobile App:** A close-up of a hand holding a smartphone.
- Integration of device data including bed data to EMR and 3rd party systems:** A screenshot of a medical data table with columns for dates and various metrics.
- Heart rate and respiratory rate streaming to a Dashboard:** A doctor in a white coat looking at a smartphone in a clinical setting.
- Dynamic risk assessment of patient deterioration risk scores:** Two smartphones displaying the Voalte mobile app interface, showing a large risk score of '7' and patient information for 'Kinney, Rachel B'.

INTUITIVE. INTEROPERABLE. SECURE

ADVANCING CONNECTED CARE™ SHOULD BE INTUITIVE

Harness the power of trusted security, interoperability and proven expertise.

Built in a secure cloud-computing environment, Hillrom™ Smart Device Connectivity leverages data to create insights for clinicians at the point of care, using an easy to use communication platform.

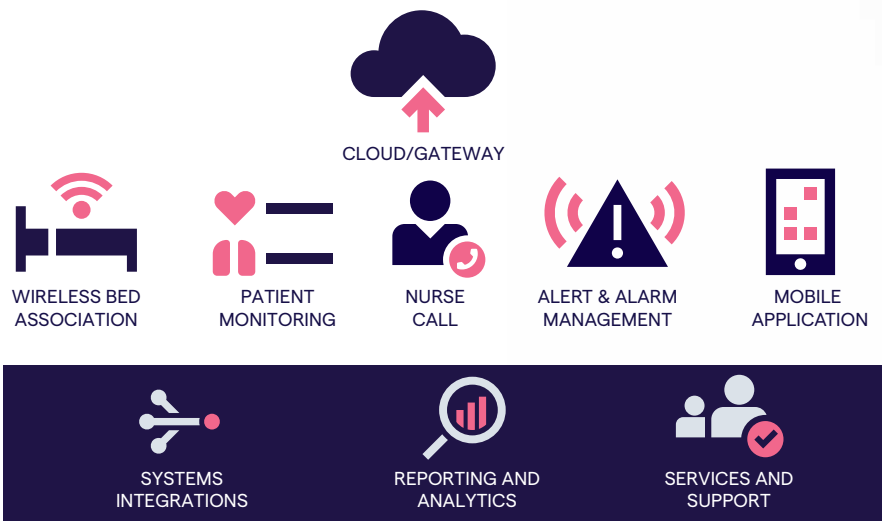

Enable your IT team to use your existing technology ecosystem, including Hillrom and 3rd party systems, without disruption to your current workflows.

Count on the support of Hillrom™ clinical and technical experts, who partner with you every step of the way, to ensure user adoption, confidence, and success.

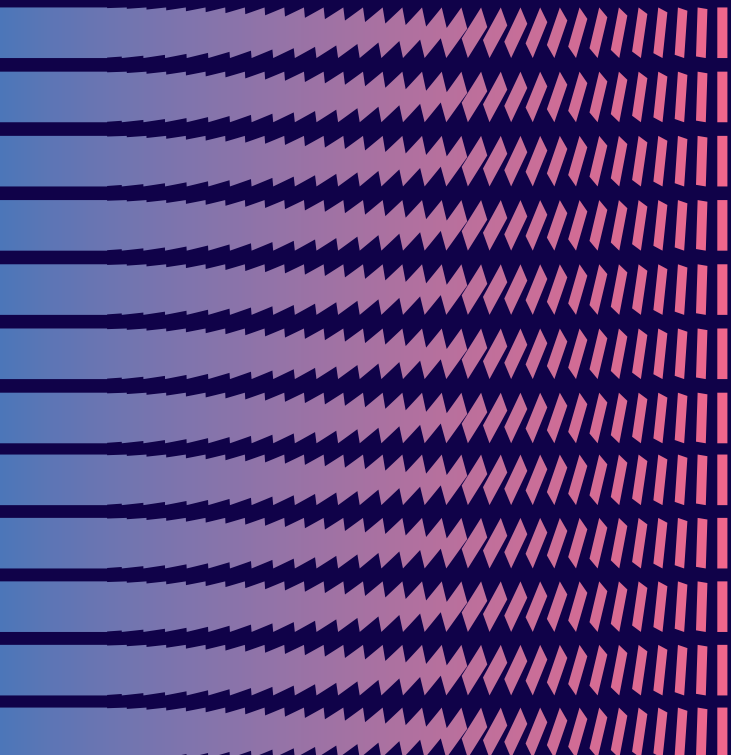

BRINGING IT ALL TOGETHER

Convert your meaningful data into actionable information and communicate it to caregivers to improve patient outcomes.
