**Summary:**  
Welch Allyn Braun Pro 6000 Ear Thermometers can be temporarily disabled when removing the device from the cradle or dock while simultaneously holding the C/F button. **Removing and replacing the battery will reenable the device.**

**Summary:**  
Braun Pro 6000 Ear Thermometers can be temporarily disabled when users remove the device from the cradle / dock while simultaneously pressing the C/F button. Pressing the C/F button while removing from the cradle / dock is a design feature intended to allow for software upgrades or inquiries when being serviced. If done unintentionally, the user will experience the device to be unresponsive, nonfunctional with no display (Similar to a dead battery). The device will not react when pressing any of the feature buttons until remedied from this service condition. If this is the case, the device can be remedied from this unresponsive state by removing the batteries for a brief period and then replacing them. Once remedied, the device should now function as intended. If this does not correct the issue, consult the user manual errors and notifications section or visit Hillrom’s Welch Allyn Technical Support at www.welchallyn.com/support.
